

PRIVATE APPLICATOR LICENSE TRAINING

Your employees can get the skills they need to **pass the Washington State Private Applicator License** test for pesticides through this two-day, interactive course. This course is for anyone whose job includes the application of restricted use pesticides for the purpose of growing an agricultural commodity. These include herbicides, insecticides, fungicides, rodenticides, fumigants, etc.

*"I feel that the pesticide applicator license program will be a very valuable tool. By helping their workforce achieve these credentials, our farms will increase safety and promote employee skill sets simultaneously. The ability for our farms to effectively and safely apply chemicals for plant protection is a priority of the industry. **WORKER SAFETY, EMPLOYEE EMPOWERMENT, FOOD SAFETY! WIN, WIN, WIN!**" - Mathias Gargus*

"Perrault Farms strongly believes in investing in human capital by creating training opportunities. We're very fortunate to have a local (accredited) university eager to fulfill our training needs. With the complexities and liabilities associated with pesticide application, we'll be sending all of our applicators to this training." - Jeff Perrault
